

Practice questions:

Char array

1. Take a sentence as an input using `getline` and display it.
2. Take a sentence as an input using `getline` with '0' as a terminating character.
3. Find the length of an input string.
4. Change the input in character array from lower-case to upper case.
5. Reverse display an input string.
6. Count the number of words in the string. Assume that each word is separated by a single space. Take '\n' as a terminating character.
7. Compare the length of two input strings.

String built-in class

1. Take three strings as an input. Concatenate these three strings into a resultant string using ',' as a separator. E.g.
First: Hello
Second: World
Third: 123
Result: Hello,World,123
2. Take an input in the string using `getline`.
